Yes, as we described previously, the digestate is sampled/analyzed in accordance with the requirements of the permit and NY590.

Okay, we will take a look. Do you know what additional material was put into the digester besides the animal waste? Also, just to clarify, the screen shot is a complete listing of all the elements that are tested for at digester facilities?

Andrea,

The "lagoon" samples are the digestate. Sorry, I should have said that....

Hi Sara,

I believe there was a mix up about what information EPA wanted.

We had requested an analysis of digester output, not lagoon manure. Please send this information prior to the meeting so we can put this issue to rest. When providing the analysis, if possible, mention the input to the digester.

Thanks,

Andrea
